SKILLS

Programming: Python, C, C++, Java, SQL, R
ML & AI: Machine Learning, NLP, Deep Learning, LangChain LLM, RAG
Libraries: NumPy, Pandas, Matplotlib, Seaborn
Frameworks/Tools: FastAPI, Anaconda, MATLAB, Docker, PyTorch
Databases: MySQL, NoSQL, SQL
Core CS: DSA, DBMS, Probability & Statistics, System Design

EDUCATION

Kalinga institute of industrial technology August 2024 – August 2028
Bhubaneswar, Odisha
B.tech in CSE (AI/ML)

EXPERIENCE

Independent ML Developer (Project-Based) 2024 – Present

- Designed and implemented multiple machine learning models for real-world prediction problems.
- Built end-to-end ML pipelines including data preprocessing, feature engineering, model training, and evaluation.
- Worked with Python, NumPy, Pandas, Scikit-learn.
- Developed classification and regression models.
- Gained hands-on experience in ML concepts, NLP basics, and API-based deployment (FastAPI).

PROJECT

- Insurance Premium Category Predictor:**
Built a machine learning model to predict insurance premium categories using customer data.
Data preprocessing and feature engineering.
Classification model training and evaluation.
- Image and handwritten notes to structured JSON system using Gemini Vision:**
Built an AI-powered document understanding system that converts handwritten notes, images, and scanned documents into structured JSON data.
Integrated Gemini Vision API for intelligent OCR and field extraction.
Implemented schema-based JSON generation with real-time processing support.
- YouTube AI Assistant using RAG + Gemini:**
Built an AI-powered YouTube Question Answering system using Retrieval-Augmented Generation (RAG).
Extracted and processed YouTube video transcripts using YouTube Transcript API.
Implemented semantic search using FAISS vector database and Sentence Transformers embeddings.
Integrated Google Gemini API for contextual question answering and video summarization.
Supported multilingual transcript understanding with automatic translation to English.

CERTIFICATES

Python for Data Science – Udemy October 2025

- Learned Python fundamentals for data analysis.
- Worked with data handling, analysis, and basic visualization.

AI for Beginners – HP LIFE 2025

- Learned AI fundamentals, data importance, business applications, and ethical considerations.
- Issued by HP Foundation.
